

(a) Causal streaming input-output

3-component acceleration 0.5-s packets

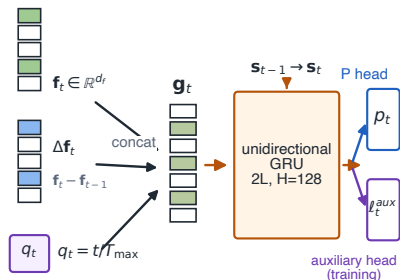

$$\mathbf{x}_t, \mathbf{f}_{t-1}, \mathbf{s}_{t-1} \mapsto p_t, \mathbf{f}_t, \mathbf{s}_t$$

(b) Causal packet encoder

Left padding keeps the encoder causal; no future packets are read.

(c) Delta-state decision

confirmation and station association

Single-station candidate, not an alert.
